

E-Commerce Sales Dashboard

Comprehensive Insights Report | May 2026

Figure 1 – Sales Overview Dashboard (01 May – 13 May 2026)

Total Revenue	Total Orders	Total Quantity	Avg Order Value	Total Customers	Revenue Growth
101.76K	25	39	4.07K	20	18.60%

1. Key Business Insights:

Revenue Leader: Smart Watch drove the highest product revenue (30k), nearly 3* the second-ranked Running Shoes (20k), confirming electronics dominate spending.

Geographic Hotspot: Visakhapatnam contributed 42.93% (43.68k) of the total revenue more than all other cities combined, making it the primary target market.

Category Dominance: Electronic is both the best revenue category and the top quality solid, validating a tech savvy customer base.

Low Order Volume: Only 25 orders from 20 customers (May 1-13) suggested a high-AOV, low-frequency purchasing model typical of electronics/furniture segments.

Hyderabad Opportunity: Second city (24.06%) but significantly below Visakhapatnam targeted Campaigns could close the gap.

Revenue Growth: An 18.60% growth rate signals healthy month-on-month momentum; the spike to 15k on days 6-7 (May) warrants further investigation for repeatability.

2. Technology Stack:

Layer	Tool / Technology	Purpose
Data Storage	Microsoft Excel / CSV	Raw transactional data source for orders, products, cities
Data Processing	Power Query (M Language)	ETL — data cleaning, type casting, merging tables
Business Logic	DAX (Data Analysis Expressions)	KPI measures, YoY/MoM growth %, dynamic filtering
Visualization	Power BI Desktop	Interactive charts, slicers, donut/bar/line visuals
Deployment	Power BI Service / Report Server	Web sharing, scheduled refresh, role-level security
Date Intelligence	Power BI Date Table + DAX	Time-based filtering (date range slicer, daily trend)

3. Problems Identified & Solutions Implemented:

Business Challenge	Analytics Solution Implemented
Scattered sales data across multiple Excel sheets with inconsistent data formats.	Used Power Query to merge tables, clean datasets, and standardize date formats to DD-MM-YYYY.
No unified KPI view for quick executive decision-making.	Created KPI cards for Total Revenue, Total Orders, Total Quantity, Average Order Value (AOV), Top City, and Revenue Growth.
Revenue trends were hidden within aggregated monthly figures.	Developed a Daily Revenue Trend line chart (May 1–13) to highlight short-term sales fluctuations and intra-month patterns.

No ability to drill down into specific products, categories, cities, or price ranges.	Added interactive slicers for City, Category, Product Name, and Price with cross-filtering capabilities.
Difficult to identify top-performing and underperforming products.	Built a Total Revenue by Product bar chart with descending sorting and integrated product-price references.
Revenue growth metrics were unavailable for monitoring business performance.	Create a DAX measure to calculate Revenue Growth %: $(\text{Current Revenue} - \text{Prior Revenue}) / \text{Prior Revenue} \times 100$, displayed as a KPI card.
Limited visibility into regional sales performance.	Designed a Revenue by City donut chart and Orders by City bar chart to compare city-wise contributions.
Category-level demand patterns were unclear.	Added a Total Quantity by Category visual to identify the highest-performing product categories.
Product information lacked quick accessibility within the dashboard.	Included a detailed product table displaying Category, Product Name, and Price for quick reference.

4. Main Business Impact:

- **Faster Decision-Making:** Executives can assess overall business health in under 30 seconds via the top KPI bar — no manual report compilation needed.
- **Geo-Targeted Marketing:** Visakhapatnam's 42.93% revenue dominance enables focused regional campaigns and logistics investment to maximize.
- **Category investment Clarity:** Electronics dual leadership (revenue + quantity) justifies increased inventory and targeted promotions in this segment.
- **Trend Anomaly Detection:** The daily revenue spike (May 6-7) is now visible; teams can investigate triggers (promotions, flash sales) for replication.
- **Cross-Sell Opportunity:** The product-price table (499-6,999) provides sales teams with a structure view to bundle complementary products.
- **Reduced Reporting Time:** Automated refresh replaces manual Excel aggregation, estimated to save 4-6 hours per week for the analytics team.
- **Scalability:** Slicer-driven architecture allows the same dashboard to serve new cities, categories, or date ranges without redesign.

5. Recommendations:

1	Expand Visakhapatnam Inventory Stock higher quantities of Smart Watch and Office Chair to meet demonstrated demand.
2	Hyderabad Growth Campaign Launch city-specific discount codes to push Hyderabad from 24% toward 30%+ revenue share.
3	Investigate Revenue Spike Analyze May 6–7 orders for promo codes, referral sources, or seasonal triggers and replicate.
4	Introduce Customer Segmentation Add RFM (Recency, Frequency, Monetary) analysis to the dashboard for retention targeting.
5	Kitchen & Furniture Up-sell Water Bottle (■499) buyers represent a low-AOV entry point — pair with Kitchen bundles to lift basket size.
6	Extend Date Range A 30–90-day view will smooth out short-term volatility and expose true seasonal patterns.
